Instructions: Eat whatever you want but include protein, carbohydrates and fat or substitute 600 calorie shake

Menu Total:	5094	122.5	596.7	410.9
Percent of Calories:		21.6%	46.9%	32.3%

Substitute Instructions: The protein, carbohydrate and fat content of the meals (grams and calories) are simply the ideal framework”, based on your goals, for the foods of your choice to fall into. You may substitute at will—just keep the calories and grams of each food you switch as close as possible to its replacement.

Your body composition goal is to gain muscle, therefore your food plan is structured to accomplish both outcomes – improve performance and muscle gain

Total daily calorie intake should be moderately above current expenditure. If weight gain does not occur at approximately ½-1LB per week (the higher end for growing athletes), you may add roughly 100 to 250 calories to your daily total (based on body size) consisting of equal amounts of carbohydrates and protein and moderate fat. For example, 20 g protein, 20 g carbohydrate, 10 g fat equaling 250 calories. If preferred, use your shakes or snacks to supply extra calories. Following the addition of extra calories if after 1- week weight gain does not occur, repeat the above process.

In some cases rapid weight gain may offset specific performance parameters. Therefore if body fat or overall weight increases undesirably, slightly reduce daily caloric intake or add a preferred form of aerobic exercise until you achieve your desired weight trend.

In adults some form of resistance training is needed to create a physiological environment conducive to depositing the extra nutrition into muscle as opposed to fat storage.
